

Impulses generating mechanism - patent **RO 110853 C**

The technical solution of the patent, allows variable or permanent mechanical movement generation, without needing connections with the environment

	The corp 8 Diameter(dm)	The corp 8 High(dm)	The channel c length (m)	The pressure of work (bar)	The frequency of work (Hz)	Energy of impulses (daNm)	Need of power (Kw)
	1	0,3	0,4	25	22	300	51
	3	1	0,7	10	6	2100	73
	1	0,3	0,4	100	45	1200	400

Applications

- sonic drilling
- dead recoil devices
- forge manufacturing machines
- compacting and vibrating constructions equipment
- propulsion systems with smoothing devices for floating vehicle
- break up for rocks and minerals equipment (polyhedral structure of granule)
- compacting equipment

Advantages

- easy to manufacture with ordinary technological means
- compact structure
- large range of dimensions and powers
- easy to automatize
